Michael,

If you could put the rails with the Amherst server that would be great. The DL380 uses very narrow rails, about 3/4" slides. I'll ask Cam if he can pick them up when he gets the server.

Thanks,  
-Eric

Didn't you need an external storage array too?

I have a spare if you want it

the body isn't even cold yet and the vultures are already circling over my surpluss pile.

I'd have to look to be sure but I'm almost certain I have few.

Do we have any rails that will fit a Proliant DL380 G3? I have the rails that mount to the server chassis, but will need rack-side hardware to install in WRHO cabinet.
